COMPRESSION PRODUCTS

COMPRESSION FITTINGS & VALVES

Applications

Highly recommended for the civil and mining market for the conveyance of water, as well as Irrigation and Agriculture.

Astore Keymak is a leading provider of high-quality thermoplastic solutions, offering a comprehensive range of products that empower customers across Sub-Saharan Africa to achieve success in diverse industries. Our complete PN16 pressure-rated range of compression fittings and valves is manufactured to SANS 17855 standards, ensuring reliability, durability, and performance that support excellence across multiple applications.

Unidelta Compression Fittings

Unidelta Fittings

Unidelta ensures a perfect sealing arrangement in the construction of pressurised liquid distribution systems. The Unidelta compression fittings are specifically designed for connecting polyethylene pipes with outside diameters ranging from 16 to 110 mm. They are suitable for conveying drinking water and other fluids at pressures of up to 16 bar at ambient temperature. These reliable fittings are widely used across various sectors, including mining, agriculture, infrastructure, and industry.

Certification

- ✓ SANS 17885 Approved
- ✓ Jaswic Approved

Advantages of Unidelta - DELTONE series PP Compression Fittings:

- ✓ All-Plastic Construction: No risk of oxidation or corrosion.
- ✓ High Pressure Resistance: Operates up to 16 bar at 20°C.
- ✓ Compact Design: Easy installation even in confined spaces; removable handle.
- ✓ Easy Assembly: Simple to fit, featuring the innovative DELTONE system (Ø63).
- ✓ UV Protection: UV-stabilised materials suitable for outdoor use.
- ✓ Two-Way Flow: Functions efficiently in either flow direction.
- ✓ Easy Inspection: Valve ball can be inspected and cleaned with ease.

UNIDELTA COMPRESSION FITTINGS ASSEMBLY INSTRUCTIONS

16 mm - 40 mm

50 mm - 110 mm

Cut the pipe squarely using special pipe cutting tools or circular or band saw. It is advisable to use a guide box to ensure a square cut.

Cut the pipe at the right angles using a special pipe cutter or a circular belt saw. When using a belt saw, it is advisable to use a guide box to ensure a square cut.

Eliminate any burrs and bevel the end of the pipe facilitate easy assembly and to prevent damage to the fitting gasket. The outer surface of the pipe must be free from imperfections or indentations where the body of the fitting makes contact with the pipe.

Unscrew the blue ring nut without removing the rings locked inside (integral component).

Unscrew the blue nut and put it onto pipe followed by the white clamping ring. Make sure the clamping ring is in the correct position, with the largest diameter facing the fitting.

Place the integrated component on the pipe followed by the O-ring. It is useful to lubricate the end of the pipe and the O-ring with a silicon based lubricant or other lubricant that does not affect the potability of the water.

Press the pipe axially into the fitting, past the O-ring, until it touches the internal stop inside the fitting body.

Press the pipe axially into the fitting until it touches the internal stop inside the fitting body.

Tighten the ring nut by hand and then use the torque wrench provided. The ring nut must be tight, but it does not need to reach the end of the fitting body.

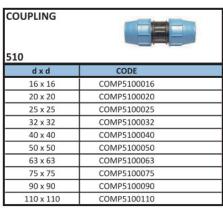

Tighten the ring nut by hand and then use the torque wrench provided. The ring nut must be tight, but it does not need to reach the end of the fitting body.

PRESSURE RATING 16-110 mm: 16 Bar

Saddle & Tools

Technical Features

- The full range is suitable for a maximum pressure of 16 bar;
- Complete range of threaded outlets for each diameter;
- New generation PP-B material;
- Suitable both for PE pipes (with dimensions according to EN 12201-2) and PVC pipes (with dimensions according to EN 1452-2);
- High solidity of the threaded outlet due to the increased stainless steel reinforcing ring;
- Toric seal (O-ring) perfectly following the shape of the pipe.

Components

- Bolts: Galvanized steel;
- Bottom saddle: Highly stable polypropylene (PP-B) with UV protection;
- Gasket: O-Ring NBR;
- Upper saddle: Highly stable polypropylene (PP-B) with UV protection;
- Reinforcing ring: Stainless steel (AISI 430).

SADDLE ASSEMBLY INSTRUCTIONS

1. Identify the point of installation and make sure the external surface of the pipe is free from soil, imperfections and indentations in the area of contact with the gasket. Position the gasket in the saddle seat.

2. Pace the lower part of the saddle (the base) in the chosen gore. Couple the upper part of the saddle (the branch) with the lower one.

3. Insert the screws from below (the bottom part of the saddle (has a recess to receive the head of the screw). Tighten the nuts alternatively.

Clamp Saddle - Alternative Procedure

4A. Drill a hole in the pipe wall taking care net to damage the saddle screw thread and the O-ring. Use a spacer to avoid drilling through the other side of the pipe. Better to use a milling drill so as to not damage the screw thread of the saddle and the O-ring.

4B. Use a white indelible felt-lip per to draw a reference port on the pipe to allow repositioning of the saddle after drilling.

5. Drill the hole on the pipe wall and remove the scraps. Make sure the surface around the hole is clean and smooth before repositioning the saddle.

6. Assemble the saddle according to the marked lines, to keep the hole aligned with the branch direction. It can help to use a pin such as the drill used to make the hole.
